## Press Release

I am honored and privileged to announce that our humanitarian trip to San Miguel, San Salvador and Tapeoyo in El Salvador was extremely successful and humbling. Our team of leading doctors, were not only happy to help the needy but were also grateful that there lives were touched by this profound experience. By the time we were leaving, they had committed to come back with there other colleagues, so they can also experience the same.

This mission could not have been possible without the help of volunteers that included medical & nursing students, local doctors and local government officials.

While Bobby was visiting El Salvador, a small incident of health helped him realize that how difficult it is to get not only good medical assistance but also the high cost of medicine in that country.

This led to the start of "Friends for Good Health". He approached many of his personal friends in the field of Healthcare. These friendships span over more than 20 years, and of course most of them enthusiastically agreed to join Bobby's vision and make "Friends for Good Health" a success story.

Today, we take pride in stating that our organization has served more than tens of thousands of patients in our first two years of serving.

The visiting doctors had to have their licenses certified by the department of health to practice in the respective country. Even though the process of certification was difficult, our determination to serve our brothers and sisters with this humanitarian effort was so overwhelming, that we left no stone unturned to but succeed.

The doctors who joined us on this trip showed passion, dedication and professionalism, to provide the utmost medical care to all the patients.

Our leading team of healthcare providers included:
